

Your Complete RV & Camper Winterization Checklist

- Drain and flush all pipes
- Add antifreeze to your water system
- Remove all bedding, food and clothing, then thoroughly clean your RV's interior and exterior, including the storage spaces
- Check the exterior for cracks or split seams
- Fill your fuel tank and add a fuel stabilizer
- Check your radiator and top up all fluids
- Inflate your tires and consider using UV-reflective tire covers if you're storing your RV outdoors
- Check your brakes
- Turn off the propane tank(s) and remove if you're storing your RV indoors
- Disconnect your battery. Remove single batteries and store in a warm, dry environment and consider using a trickle charger. Keep multiple batteries charged and connected
- Choose carefully between indoor and outdoor storage for your RV
